Complaint by the undersigned pilot regarding the violation of VFR rules and dangerous flying.

The undersigned pilots are complaining against the results of this morning flight, mainly about the results of task 2, that have been badly affected by the fact of flying in VFR rules or not.

We agree that in the Axmer rules II-9 there is written that is not a matter for complaint the violation of the VFR flight rules but we consider this behavior a dangerous flight.

Above the clouds the wind was much faster than under so it was easy to do a long distance and we think that it was too dangerous to have many balloons going up and down through the clouds.

Since the director has cancelled task 4 because the base of the clouds was too low, in fact it was between 2600 and 2800, it means that he also was concerned about the safety of flying in clouds.
